AUTOMATED MEDICAL DIAGNOSTIC PRESCRIPTION SHEET

Date: 2026-06-04 23:17

Facility: MedAgentix Virtual Care Unit

PATIENT PROFILE		VITALS RECORDED	
Age:	N/A	Heart Rate:	85 bpm
Gender:	N/A	Oxygen Sat. (SpO2):	96%
Vital Alerts:	Normal / Stable	Blood Pressure (BP):	120/80 mmHg
		Body Temp:	101.5 °F

PRIMARY DIAGNOSIS: Bronchial Asthma

Severity: Severe

ML Model Confidence: 22.7% (LOW)

Consensus Agreement: 50% Agent Voting

Diagnostic Source Path: Flagged For Review

CLINICAL REASONING & RELEVANT PATHWAYS

[!] Low confidence (<70%). ML prediction is uncertain. Differential diagnosis suggests 'Bronchial Asthma' but specialist consultation is strongly recommended.

Differential Candidates Assessed: Heart attack (Score: 0.068), Paralysis (brain hemorrhage) (Score: 0.038), AIDS (Score: 0.029)

AI EXPLAINABILITY & BIOMARKER REASONING (SHAP)

Below is the Shapley additive explanations (SHAP) feature importance chart. It shows which patient biomarkers and symptoms contributed to the model's primary diagnostic decision. **Blue bars (positive)** indicate features that supported this diagnosis, while **red bars (negative)** indicate factors that pushed against it.

Rx - PRESCRIBED MEDICATIONS

Medication Name	Dosage	Route	Timing & Frequency
-----------------	--------	-------	--------------------

Salbutamol (Ventolin)	2 puffs as needed	Inhalation	Once Daily
Budesonide (Pulmicort)	200-400 mcg twice daily	Inhalation	Once Daily
Montelukast (Singulair)	10 mg once daily	Oral	Once Daily

RECOMMENDED CLINICAL DIAGNOSTIC LAB TESTS

- Spirometry (Pulmonary Function Test)
- Peak Flow Meter Reading
- Pulse Oximetry
- Chest X-Ray
- Allergy Testing (IgE)

CRITICAL CLINICAL ALERTS & TREATMENT PLAN

- Alert 1: [!] Salbutamol (Ventolin): Contraindicated in Severe arrhythmia. Verify patient history before administration.
- Alert 2: [!] Budesonide (Pulmicort): Contraindicated in Active TB. Verify patient history before administration.
- Alert 3: [!] Montelukast (Singulair): Contraindicated in Hypersensitivity. Verify patient history before administration.
- Alert 4: [!!] Severe/Critical condition -- hospitalization may be required. Ensure immediate medical supervision.

Care Plan Instruction: Hospitalization and medication. Immediate medical attention.

Clinical Follow-Up: Requires continuous monitoring and specialist consultation.
